Member of A1 Telekom Austria Group

Are you still standing up to IT risks?

Many companies face the issue of limited resources as well as an increasing amount of attacks and threats along with having to keep up with the rapid speed of technological development on the market. This results in significant security risks for your company that have to be identified as well as analysed and eliminated!

A1 Digital advises companies in all things related to information security and risk management. Depending on your needs, either parts of the company or the whole business can be analysed and evaluated. Using recommended actions, best practices and individual advice, A1 Digital security experts support you in solving your problems.

The 4 columns of a secure work environment:

The Enterprise Security Architecture Model

With A1 Digital's own Enterprise Security Architecture Model (ESA model), A1 Digital offers all companies the best possible advice - alongside a standardised process and taking individual needs into account.

The basis for this is industry-wide standards as well as A1 Digital security experts' years of experience.

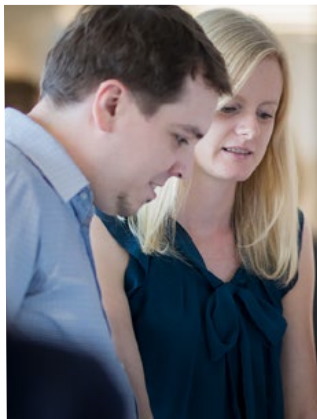

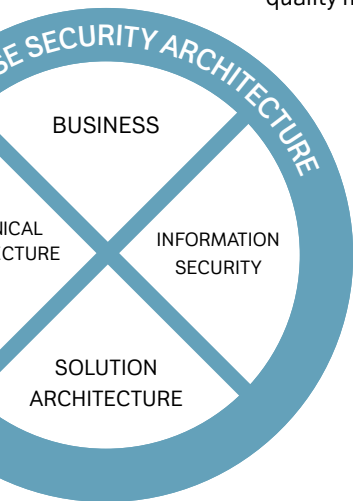

The 4 columns of the ESA model include:

- 1. Solution Architecture** considers the strategic approach as well as architecture and design of IT infrastructure including all systems and solutions
- 2. Technical Architecture** considers the technical evaluation, design, implementation and review of certain IT systems

3. Business considers the operational perspective of risks as well as their impact on operative business

4. Information Security considers business processes, regulatory requirements, documentation, security concepts and risk/ quality management within the company

Consulting services

Based on the ESA model, A1 Digital offers various consulting services that can be used individually or freely combined to provide your company with tailor-made security advice:

- **Risk analysis**
GAP analysis and risk analysis of the whole company, including applied technology, architecture and processes
- **Security evaluation**
Analysis and risk analysis of the data centre landscape, taking into account the current threat level, security requirements and currently used technology and solutions to protect critical systems
- **Cloud readiness**
Analysis of the company's readiness (strategy, processes, organisational structure, culture etc.) for the use of cloud technology

... from A1 Digital

- **DDOS protection**
Advice in the architecture and design phase as well as support in rolling out solutions to protect from DOS and DDOS attacks
- **Simulation of data protection violations**
Company and process analysis as well as the simulation of a data protection violation in accordance with the GDPR
- **Business processes evaluation**
Analysis of critical business processes, evaluation using company requirements and creation of a process optimisation plan
- **Evaluation of reaction to security incidents**
Analysis and optimisation of incident response processes, development of emergency plans, implementation of staff training

Enterprise security architecture by A1 Digital:
comprehensive advice for complete
protection against attacks and threats.

A1 Digital – the ideal partner for digitization

A1 Digital supports companies in the challenging process of digital transformation as a one-stop shop for digitization and technology consultancy.

To this end, A1 Digital joins the company in developing the best technical solution for their industry's individual challenges.

Your security is our priority!
