

Advancing digitalisation successfully with A1 Digital

Your partner for the digital transformation

A1 Digital – the system house for the digital transformation.

On the basis on the evermore widely available connectivity and higher transmission rates, the digital revolution is well under way and is drastically changing traditional business models.

A1 Digital supports and guides companies in this challenging process of digital transformation as a one-stop-shop for digitalisation and technology consultancy. To do this, A1 Digital develops the best technical solution together with companies for:

Interaction with customers

Optimisation of business processes

Development of new business models

Communication with partners and suppliers

Security of IT infrastructure

A1 Digital, subsidiary of A1 Telecom Austria Group and America Móvil, has locations in Munich, Vienna and Lausanne and is active in Europa, especially in Germany and the CEE countries.

Flagship projects in the areas of IoT, Cloud and Security

Exoscale of A1 Digital stands for the most modern cloud infrastructure: highly available servers in Europa, redundant data storage and GPU servers for demanding IT tasks. As part of the Helix Nebula Science Cloud Initiative, which organises the provision of cloud services to research facilities, Exoscale equips one of the world's most famous nuclear research centres **CERN** with cloud infrastructure.

Together with **Komptech**, A1 Digital implemented the solution of fleet management 4.0 with global networking. The komptech machines distributed worldwide regularly transmit service data and thus drastically reduce the quality control effort. The solution covers machine-to-machine SIM chips for global networking, a customer-specific gateway and a IoT backend platform to monitor the SIM cards.

karriere.at is Austria's leading online career portal and, as a digital company, is constantly facing the challenge of providing the best protection possible for data and services. The A1 Digital security solution creates an offensive remedy. It continuously reports on new threats, such as externally accessible infrastructure and other IT security risks, and gives the customers specific recommendations for action.

„Wherever your company finds itself on the road to digitalisation, A1 Digital will guide you through every step.“
