

Big or small, new or old – all kinds of assets, machines and plants by all sorts of manufacturers can be connected to the IoT platform.

A1 Digital IoT Platform

The powerful A1 Digital IoT platform is customised to your need yet remains flexible and affordable.

A1 Digital

A1 Digital is your reliable partner in all matters concerning digitisation: We advise you from the identification of the solution options through to the support during the running operation. With more than 500 successfully implemented projects, we have experience in many sectors and integrate even existing digitisation solutions into a complete solution.

Find out more on <https://a1.digital>

Connect your company today!

With years of expertise, numerous references, several thousand networked devices worldwide and optimal network coverage around the globe, we also support your company to become even better through digitisation.

Automated quality assurance and improved customer service of globally distributed machines.

Kooperation Smart Meter

Digital power meters in every household in Austria.

Networked hydrants for real-time online monitoring

Contact us and set up an appointment with our digitisation experts.

Member of A1 Telekom Austria Group

The A1 Digital IoT platform: A simple solution for complex requirements

The communication between machines and applications in the Internet of Things yields benefits for all companies. More efficient use of machines thanks to information in real-time, reduction in costs thanks to remote maintenance or new insights using machine learning are just a few examples.

Nowadays, however, the demands placed on staff and machines go far beyond sporadically determining the actual status. Instead, it is necessary to obtain data about current and past conditions as well as forecasts at any time. Due to the wide range of devices and sensors, the complexity increases simultaneously, since the data amount has to be evaluated and visualised

A centralized platform that can map all your deployment scenarios is indispensable for that, as well as for remote control of the devices.

The A1 Digital IoT Platform covers these requirements as all devices and sensors can be easily managed, data analysed and individual dashboards created.

Connected assets: a resource-friendly and innovative way of working.

Endless possibilities

The nconnection of machines opens up new business areas and service options. Through machine collaboration, not only optimizations but also scaling that individual machines could not perform become possible.

Higher sales and profits

By connecting your machines, you are one step ahead of your competitors! New possibilities such as extended customer service or the provision of information opens up additional sources of income.

Reduced costs and effort

Connected machines send precise information about the course of behavior. Maintenance work can thus be better planned, downtimes or failures can be minimized, and production errors can be detected more quickly.

The A1 Digital IoT Platform – all benefits at a glance

Control centre IoT Platform

The platform has access to the functions of all devices and sensors, thus enabling complete remote control.

A grip on the future

Receive analyses of past and current conditions as well as future forecasts using machine learning and artificial intelligence.

Information in real time

Information about condition, Status, place and firmware upgrades and a lot more can be transferred right at your desktop.

Safety & support

Data centre in the DACH region, guaranteed to be GDPR compliant, fail-safe, geo-redundant and 24/7 support hotline.

Flexibility on all levels

Open interfaces according to industry standards completely without Vendor-LockIn. Both on an infrastructure and application-related level.

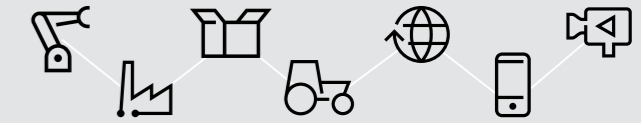

Customised user management

You can map your business structures using individually manageable groups, roles or your own clients.

Achieve a more efficient performance and innovative business solution in 3 steps

1. Connect machines, devices or plants

2. The IoT Platform prepares the received data

Remote access to machine settings

Data analysis and forecasts based on machine learning

Receive error messages and predict maintenance work

Information 24/7 regarding past and current status and conditions

3. Effizienteres Arbeiten & neue Geschäftsmodelle

Cost reductions through efficient maintenance and quick response when needed.

Sales increase through more efficient utilization and planning of resources.

Data opens up new business fields, customer interaction opportunities and much more.
